Abstracts

Pulmonary alveolar proteinosis (PAP), also known as pulmonary alveolar phospholipoproteinosis, is a diffuse lung disease characterized by the accumulation of amorphous, periodic acid-Schiff (PAS)-positive lipoproteinaceous material in the distal air spaces.

Scope of the Report:

This report studies the Pulmonary Alveolar Proteinosis (PAP) market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Pulmonary Alveolar Proteinosis (PAP) market by product type and applications/end industries.

Treatment of PAP depends on the form of PAP and age of a patient with PAP and severity of the disease. WLL is a standard treatment for PAP and the only treatment which has shown improved symptoms and oxygenation in patients. Another treatment of PAP includes using recombinant granulocyte colony stimulating factor (GM-CSF) which is given by nose or with a subcutaneous injection which is not approved yet.

The global Pulmonary Alveolar Proteinosis (PAP) market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
