Abstracts

The global Pulp Drying Machine market size is expected to reach \$ 157 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

A pulp drying machine is an industrial system used to remove moisture from wet pulp and convert it into stable, transportable forms such as pulp sheets, rolls, flakes, or loose fibers. The equipment typically integrates dewatering, pressing, thermal drying, air circulation, heat recovery, sheet cutting, and baling processes, and may adopt airborne, flash, cylinder, belt, or other drying technologies according to pulp type and production requirements. It is widely used in the production of market pulp, dissolving pulp, fluff pulp, mechanical pulp, and recycled pulp, and its performance directly affects product moisture uniformity, fiber quality, energy consumption, and production efficiency. In 2025, global Pulp Drying Machine production reached approximately 2558 units, with an average global market price of around 43 k USD/unit. The production capacity for Pulp Drying Machine in 2025 was approximately 3000 units. The typical gross profit margin for Pulp Drying Machine between 20% and 40%.

The global pulp drying machine market is primarily driven by capacity expansion and equipment modernization in market pulp, dissolving pulp, fluff pulp, and recycled pulp production. Growing demand for packaging paper, tissue products, regenerated cellulose fibers, and bio-based materials is supporting investment in high-capacity and energy-efficient pulp drying lines. Meanwhile, rising energy costs and stricter environmental requirements are encouraging pulp producers to adopt heat recovery systems, advanced process control, low-emission drying technologies, and dryer rebuild solutions. The market is relatively concentrated in large integrated pulp drying lines, where suppliers with strong engineering, automation, installation, and lifecycle service capabilities maintain competitive advantages, while regional manufacturers mainly

participate in medium- and small-capacity systems, flash dryers, and retrofit projects.
