According to our (Global Info Research) latest study, the global Pulp and Paper Sizing Agents market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Pulp and paper sizing agents are chemicals used in the papermaking process to improve the paper's resistance to liquid penetration, control ink absorption, and enhance printability. These agents are applied to the paper fibers during the paper manufacturing process to modify the surface properties of the paper, making it more resistant to water, ink, and other liquids. Common sizing agents include rosin, alum, alkyl ketene dimer (AKD), and alkyl succinic anhydride (ASA). The sizing process is crucial for achieving desired characteristics in paper products, such as improved strength, reduced dusting, and enhanced print quality, ultimately influencing the final performance and appearance of the paper.
