Abstracts

The global Pulp and Paper market size is expected to reach \$ 75100 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Paper pulp is a lignocellulosic fibrous material prepared by chemically or mechanically separating cellulose fibres from wood, fibre crops or waste paper. The wood fiber sources required for pulping are, 45% sawmill residue, 21% logs and chips, and 34% recycled paper. Pulp is one of the most abundant raw materials worldwide.

Paper pulp is the raw material for paper manufacture that contains vegetable, mineral, or man-made fibres. It forms a matted or felted sheet on a screen when moisture is removed.

Wood pulp, the most used paper pulp, is a type of material that is created by processing wood collected from trees, and serves as the basis for the creation of a wide range of paper-based products. Several different processes are utilized to reduce the wood into a form that is ideal for manufacturing different types of paper goods, including paper used in printing books, magazines, and newspapers. The resulting paper product can also be used to create other paper products, including disposable paper plates, paper towels, and other common household items.

In 2024, global Pulp and Paper production reached approximately 95 million tons, with an average global market price of around US\$ 562 per ton.

The industry's gross profit margin is around 20%.

Market Drivers

1: Competition in the paper pulp industry is fierce

There are many manufacturing companies in the paper pulp industry. The products produced by different companies are highly homogeneous and the production processes are relatively mature. Therefore, the differences in paper pulp products on the market are small and competition among companies is very fierce.

2: Modern factory

In recent years, companies have continued to upgrade and expand production line equipment in old factories in order to build new modern factories. like:

Arauco's MAPA project in Chile: The old No. 1 production line was shut down, the No. 2 production line was modernized, and a new No. 3 production line was built.

3: Bio environmentally friendly and fossil fuel-free factory

Environmentally friendly upgrade of CMPC Brazil factory:

Upgrades in the areas of waste management, sewage treatment, atmospheric emissions, gas treatment systems and environmental management ensure excellent prevention and mitigation of impacts, especially to prevent any type of problems for the plant's neighbours.
