## Abstracts

According to our (Global Info Research) latest study, the global Pulse Ion Blower market size was valued at US\$ 158 million in 2024 and is forecast to a readjusted size of USD 245 million by 2031 with a CAGR of 5.5% during review period.

Pulse Ion Blower is a static elimination device that generates high-concentration positive and negative ions through pulse technology to neutralize static electricity on the surface of objects. It uses a high-voltage power supply to generate corona discharge at the tip of the discharge needle (or electrode), ionizes air molecules into positive and negative ions, and controls the rhythm and intensity of ion release through pulse signals. Pulse ion blowers have the characteristics of high efficiency and energy saving, low energy consumption, anti-pollution, and intelligent control. They are widely used in semiconductor wafer processing, microelectronics assembly, medical equipment production, biological laboratories and other fields.
