## **Abstracts**

According to our (Global Info Research) latest study, the global Pulse Tube Cryocoolers market size was valued at USD 299.2 million in 2023 and is forecast to a readjusted size of USD 415 million by 2030 with a CAGR of 4.8% during review period.

The pulse tube refrigerator (PTR) or pulse tube cryocooler is a developing technology that emerged largely in the early 1980s with a series of other innovations in the broader field of thermoacoustics. In contrast with other cryocoolers (e.g. Stirling cryocooler and GM-refrigerators), this cryocooler can be made without moving parts in the low temperature part of the device, making the cooler suitable for a wide variety of applications.

Pulse tube cryocoolers are used in industrial applications such as semiconductor fabrication and in military applications such as for the cooling of infrared sensors. Pulse tubes are also being developed for cooling of astronomical detectors where liquid cryogens are typically used, such as the Atacama Cosmology Telescope or the Qubic experiment (an interferometer for cosmology studies). PTRs are used as precoolers of dilution refrigerators. Pulse tubes will be particularly useful in space-based telescopes where it is not possible to replenish the cryogens as they are depleted. It has also been suggested that pulse tubes could be used to liquefy oxygen on Mars.

Global Pulse Tube Cryocoolers main players are Sumitomo Heavy Industries, Chart Industries, Inc., Cryomech, Inc, Thales cryogenics, AIM, etc. Global top five manufacturers hold a share over 60%. North America is the largest market, with a share over 35%.
