A pulse voltage generator is an electronic device used to generate pulse signals with a specific amplitude, width and frequency. It can control the characteristics of the pulse signal by adjusting parameters, such as the rise time, fall time, duty cycle, etc. of the pulse. A pulse voltage generator usually consists of a signal generator and a pulse modulation circuit. The signal generator generates a basic periodic signal, such as a sine wave, square wave or triangle wave, and then processes the signal through a pulse modulation circuit to turn it into a pulse signal. Pulse voltage generators are widely used in various fields, such as electronic experiments and research, communication system testing, sensor testing, power system testing, etc. It can be used to test and verify the performance, response and stability of circuits, as well as test the insulation performance, voltage withstand capabilities of various equipment, etc.
