A pulsed electric field ablation catheter is a medical device used to treat cardiac arrhythmias. This catheter is typically used to ablate abnormal electrical activity in heart tissue through pulsed electric fields to restore normal heart rhythm.

Specifically, the catheter uses energy generated by a pulsed electric field to heat or destroy abnormal cells in heart tissue, thereby intervening in abnormal electrical signaling pathways. This helps restore normal heart rhythm and is particularly effective in the treatment of certain arrhythmias.

The use of pulsed electric field ablation catheters is usually performed during cardiac catheterization procedures and is performed by experienced cardiac specialists. This treatment is considered an effective option in some arrhythmia cases, but appropriateness needs to be determined on a patient-by-case basis.
