According to our (Global Info Research) latest study, the global Pump Jack market size was valued at USD 2535.4 million in 2023 and is forecast to a readjusted size of USD 3276.8 million by 2030 with a CAGR of 3.7% during review period.

A pump jack is a device used in the petroleum industry to extract crude oil from a oil well where there is not high enough pressure in the well to force the oil to the surface. These pump jacks physically extract the oil for use.

The use of pump jack is limited to onshore application with very less use in offshore application, due to large space footprint. Onshore fields offer the requisite surface area and well spacing for the installation of pump jacks. Moreover, onshore fields allow for easy maintenance and repair, as they are easily accessible or well connected to monitoring facilities.
