Abstracts

According to our (Global Info Research) latest study, the global Pump Refurbishment market size was valued at US\$ 46607 million in 2025 and is forecast to a readjusted size of US\$ 65971 million by 2032 with a CAGR of 5.1% during review period.

Pump refurbishment means that as the use time of the water pump increases, its internal parts may cause the performance of the water pump to decline due to wear, aging, etc., and then the original water pump is reprocessed, repaired and improved to improve its performance and efficiency.

The strongest driver is the large installed base of pumps in water & wastewater, oil & gas, chemicals, power, mining, pulp & paper, food & beverage, marine, and general manufacturing. Pumps are mission-critical rotating equipment, and refurbishment is often cheaper and faster than full replacement, especially for engineered pumps, large vertical pumps, slurry pumps, API process pumps, boiler-feed pumps, and obsolete models.

A second driver is downtime reduction. Flowserve highlights local Quick Response Centers that provide in-shop maintenance, engineering support, and field services for pumps, valves, seals, actuators, and other critical equipment regardless of the original manufacturer.

Energy efficiency is another important driver. Many end users refurbish pumps not only to repair failures but also to improve efficiency through impeller trimming, rerating, coating, seal upgrades, bearing upgrades, hydraulic redesign, and motor alignment.

The largest end-use sectors are Water & Wastewater, Oil & Gas, Chemicals & Petrochemicals, Power Generation, Mining, General Industry, Marine, HVAC, and Food & Beverage. Water and wastewater create steady demand because municipal pumping assets are aging and must remain operational. Oil & gas and chemicals demand higher-value refurbishment because pumps often operate in corrosive, high-temperature, high-pressure, or hazardous environments. Mining and slurry applications generate recurring rebuild demand due to abrasive wear.

Asia-Pacific is likely the largest installed-base region because of China, India, Japan, South Korea, Southeast Asia, and Australia's large industrial, municipal, mining, and infrastructure sectors.

North America is a high-value service market, supported by oil & gas, chemicals, municipal water, power, mining, and a mature aftermarket-service network.

Europe is mature but stable, with strong demand from chemicals, water utilities, manufacturing, district heating, marine, and energy-efficiency retrofit programs. Middle East demand is driven by oil & gas, desalination, power, and petrochemical facilities. Latin America and Africa are smaller but attractive in mining, water infrastructure, oil & gas, and industrial maintenance.
