## Abstracts

The global Punch Card Machine market size is expected to reach \$ 2595 million by 2032, rising at a market growth of 8.0% CAGR during the forecast period (2026-2032). Global sales of punch card machines reached 19.46 million units in 2025, with an average price of \$76 per unit.

A punch card machine is an automated management device used to record employee arrival and departure times. It verifies identity and records attendance data through biometrics (fingerprint, facial recognition), RFID cards, passwords, or mechanical punching, enabling functions such as work time statistics, monitoring of lateness and early departure, and overtime management. It can also integrate with payroll systems to automatically generate attendance reports. It is widely used in personnel attendance management in various organizations such as enterprises, factories, schools, hospitals, and government agencies, and is a fundamental hardware component for digital human resource management.

The core raw materials for punch card machines include biometric sensors (fingerprint modules 15-80 yuan / face modules 80-300 yuan), ARM architecture main control chips (Allwinner/Rockchip solutions 20-50 yuan), 3.5-7 inch touch screens (resistive screens 20-60 yuan / capacitive screens 50-150 yuan), Flash memory chips, real-time clock chips, communication modules (Ethernet/WiFi/4G optional), power management ICs, structural components (ABS plastic or sheet metal housing 15-40 yuan), and assembly accessories. Among these, the biometric module accounts for 30%-45% of the total cost (high-end modules such as finger vein/iris recognition can reach over 50% of the cost), the main control and memory chips account for 15%-20%, the display screen accounts for 10%-18%, structural components and accessories account for 15%-20%, and software licensing and testing fees account for 10%-15%.
