According to our (Global Info Research) latest study, the global Punching Reinforcement Systems market size was valued at US\$ 25320 million in 2024 and is forecast to a readjusted size of USD 36360 million by 2031 with a CAGR of 5.9% during review period.

Punching Reinforcement Systems are structural solutions designed to strengthen and reinforce concrete slabs in areas where columns or structural supports meet the slab surface. This reinforcement is essential to prevent punching shear failure, a type of failure where a column or support 'punches' through the slab under heavy loads. Punching shear typically occurs in situations where a concentrated load (such as from a column or support) is applied to a relatively small area of a slab, leading to excessive stress in that area. Punching Reinforcement Systems prevent this by providing additional strength around the column/slab connection, ensuring the slab can withstand such concentrated loads.
