Puncture drainage catheter is a medical device used for interventional treatment. Through puncture technology, the catheter is placed into the human cavity, duct or tissue organ to discharge the accumulated fluid (such as effusion, pus, bile, urine, etc.) or gas from the body. It is usually composed of a puncture needle, a guide wire, a catheter and a fixing device, and is minimally invasive and highly efficient. The core functions of the puncture drainage catheter include decompression, drainage, diagnosis and treatment. It is suitable for the treatment of effusion and infection control in various parts of the body (such as the thoracic and abdominal cavity, bile duct, urinary tract, etc.).
