According to our (Global Info Research) latest study, the global Pure Electric Single Steel Wheel Roller market size was valued at US\$ 348 million in 2025 and is forecast to a readjusted size of US\$ 492 million by 2032 with a CAGR of 5.1% during review period.

In 2025, the global production of pure electric single-drum rollers reached 54,110 units, with an average selling price of US\$6,250 per unit. The global annual production capacity of pure electric single-drum rollers is approximately 75,000 units, with a gross profit margin of approximately 25.4%. A pure electric single-drum roller is a type of mechanical equipment that uses electric power to compact the surface base of roads, airport runways, and other infrastructure. It uses electricity as its power source, replacing traditional diesel engines, and offers advantages such as environmental friendliness, low noise, and ease of operation. The upstream of the pure electric single-drum roller industry chain includes power battery packs, modules, management systems, and thermal management materials; the midstream consists of pure electric single-drum roller manufacturers; and the downstream mainly comprises industries such as road construction and public works.

The market for pure electric single-drum road rollers is currently in a phase of rapid growth, focusing on low noise, zero emissions, and friendliness to intensive urban construction. Its core competitiveness comes from high-energy-density battery systems, fast charging/battery swapping capabilities, and efficient thermal management and electronic control systems. Demand primarily comes from scenarios requiring environmentally friendly and quiet operation, such as urban infrastructure construction, road maintenance, and rail construction. Domestic and international manufacturers are

continuously improving the reliability of batteries and the overall machine. Prices are affected by battery costs, charging infrastructure, and after-sales service networks. The market outlook is promising, but challenges remain, including the construction and maintenance costs of charging infrastructure and the residual value of used equipment.
