Pure titanium powder refers to finely divided titanium metal in the form of small particles. It is typically produced through processes such as atomization or grinding, where titanium is broken down into very fine particles. These powders are often used in various industrial applications, including additive manufacturing (3D printing), metallurgy, coatings, and as a raw material for the production of titanium components and alloys. The purity of the powder is crucial for its intended applications, as any impurities can affect the properties and performance of the final product.
