Abstracts

According to our (Global Info Research) latest study, the global Purify Phosphoric Acid market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Compared with thermal phosphoric acid products, purified phosphoric acid has higher production efficiency and lower environmental protection pressure, and its product purity is equivalent to that of thermal phosphoric acid. Under the background of vigorous implementation of global environmental protection and energy saving policies, its competitive advantage is stronger. In the future, it will be the general trend to replace thermal phosphoric acid with purified phosphoric acid, and the market has great potential for development.

Purified phosphoric acid, referred to as PPA, also known as purified wet-process phosphoric acid, refers to phosphoric acid products prepared through wet process and purification process. Phosphoric acid is an important raw material in the field of phosphorus chemical industry, which is mainly produced by two processes: thermal method and wet method. The wet process phosphoric acid process refers to the method of decomposing phosphate rock powder by sulfuric acid, nitric acid, hydrochloric acid and other inorganic acids to obtain phosphoric acid. This method has the advantages of low production cost, low energy consumption, simple equipment, etc. and the disadvantage of low purity of the output product. The disadvantages can be improved by purification process.
