Abstracts

According to our (Global Info Research) latest study, the global Purlins and Side Rails market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Purlins and side rails are secondary framing members that are used to support the roof and side walls of a pre-engineered steel building. Pre-engineered steel buildings use a combination of hot-rolled sections, built-up sections, cold formed elements, and profiled steel sheets that provide the basic steel framework, with a choice of roofing panels or insulated sandwich panels for roofing. The structure also supports either a brick wall or wall cladding. The pre-engineered building (PEB) concept is designed to provide a complete building envelope system, which is energy efficient, airtight, optimum in weight, cost-effective, and can be customizable.
