A push pull air valve is a type of pneumatic valve used to control the flow of air in a system. This valve operates by pushing or pulling a knob or lever to either open or close the valve, which allows or restricts the airflow. In a pneumatic system, a push-pull air valve might be used to control the operation of a cylinder. By pushing the valve, air is allowed into the cylinder to extend it, and by pulling, the air is released, retracting the cylinder. These valves are prized for their straightforward, reliable operation and are found in various industrial machines and tools.
