According to our (Global Info Research) latest study, the global Pushback Tractor market size was valued at US\$ 273 million in 2024 and is forecast to a readjusted size of USD 418 million by 2031 with a CAGR of 6.3% during review period.

Pushback Tractor is a specially designed ground support equipment used to push an aircraft back from a parking position to a taxiway or runway. Unlike traditional tractors, pushback tractors usually have higher towing capacity and flexibility, and can effectively control the direction of the aircraft's movement while reducing safety risks to crew members and ground staff. Pushback Tractors can be divided into traditional and towbar-less (TBL) types. Traditional pushback tractors use a towbar to connect the aircraft and push it back by towing. They are highly applicable, but may take up more space. The towbar-less pushback tractor is directly fixed to the front wheels of the aircraft, providing higher flexibility and maneuverability, reducing potential safety risks and wear and tear on the aircraft. Both have their advantages, and the choice depends on airport needs and equipment conditions.
