According to our (Global Info Research) latest study, the global Put-to-Light Wall System market size was valued at US\$ 303 million in 2025 and is forecast to a readjusted size of US\$ 483 million by 2032 with a CAGR of 7.0% during review period.

Put-to-Light Wall System is a wall-based order sorting system that uses electronic displays, LED indicators, confirmation buttons, scanning devices, and control software to guide operators in placing items into the corresponding order compartments. It is typically used after batch picking in order fulfillment processes. After an item is scanned, the system lights up the target compartment and displays the required quantity or related instructions based on order information, and the operator confirms the placement by pressing a button or scanning. Put-to-Light Wall System can be integrated with warehouse management systems, warehouse control systems, conveyor lines, goods-to-person workstations, and packing stations, serving as an important warehouse automation solution for small-item order sorting, consolidation, verification, and pre-packing flow control.

Put-to-Light Wall System typically cost tens of thousands of dollars each, with gross margins usually between 20% and 40%.

The upstream supply chain of Put-to-Light Wall System mainly includes suppliers of shelving structures, sheet metal components, plastic compartments, electronic displays, LED indicators, confirmation buttons, scanners, sensors, controllers, industrial computers, power modules, cables, communication modules, and software components. It also involves supporting processes such as electronic assembly, sheet metal processing, system design, software development, wiring installation, and on-site

commissioning. The midstream segment consists of electronic display equipment suppliers, put-to-light wall system manufacturers, warehouse automation system integrators, and logistics software providers, which are responsible for solution design, equipment manufacturing, system configuration, WMS and WCS integration, and project delivery. Downstream applications mainly include e-commerce warehousing, apparel retail, pharmaceutical distribution, daily consumer goods, cross-border e-commerce, third-party logistics, store replenishment, and manufacturing spare parts warehouses. Purchasing demand is usually released together with order sorting efficiency improvement, manual error reduction, pre-packing verification optimization, and flexible warehouse transformation projects.

Put-to-Light Wall System is an important light automation solution used to improve order sorting, consolidation, and verification efficiency in warehouse fulfillment operations. It mainly serves multi-SKU, small-batch, and high-frequency order processing scenarios. As order structures in e-commerce retail, apparel and footwear, pharmaceutical distribution, third-party logistics, and store replenishment become increasingly fragmented, Put-to-Light Wall System improves manual sorting accuracy and operational efficiency through light guidance, electronic display, and confirmation interaction, while offering a strong balance between investment cost, deployment cycle, and warehouse flexibility. Future market demand will mainly come from partial automation upgrades in existing warehouses, faster order fulfillment requirements, pre-packing verification optimization, and integration with goods-to-person systems, conveyor lines, and warehouse management systems.
