The flat roof photovoltaic support system is a support structure for a solar photovoltaic system designed for flat roofs. This system includes components such as a support, a fixed base, and connectors, which are used to fix photovoltaic panels (solar panels) on a flat roof. The design of the flat roof photovoltaic support system needs to take into account the load-bearing capacity of the roof, the protection of the waterproof layer, the convenience of installation, and the stability of the system to ensure that the photovoltaic panels can efficiently absorb solar energy and convert it into electrical energy.
