Abstracts

The global PV Power Plant O&M Service market size is expected to reach \$ 5707 million by 2032, rising at a market growth of 6.8% CAGR during the forecast period (2026-2032).

Photovoltaic System Operation Services refer to continuous operation and management services provided after photovoltaic systems are built and connected to the grid, covering distributed PV systems, commercial and industrial PV projects, utility-scale solar power plants, and PV systems integrated with energy storage. These services typically include power generation monitoring, operation scheduling, equipment inspection, module cleaning, fault diagnosis, inverter maintenance, performance analysis, electricity settlement, asset management, safety management, carbon benefit management, and coordinated operation with energy storage, EV charging, and microgrid systems. Compared with basic maintenance, photovoltaic system operation services focus more on power generation revenue, asset efficiency, and long-term system performance.

The Photovoltaic System Operation Services market is shifting from manual inspection and basic maintenance toward digital, intelligent, and integrated energy operation models. With the rapid growth of commercial and industrial distributed PV, residential PV, PV-storage-charging integration, and virtual power plant applications, service providers are increasingly adopting remote monitoring, AI-based fault diagnosis, drone inspection, power generation forecasting, intelligent cleaning, energy storage dispatching, power trading, and carbon asset management. Overall, the service is evolving from ensuring stable PV system operation to improving power generation returns, optimizing energy use, participating in electricity markets, and supporting low-carbon energy management.
