A PV (Photovoltaic) solar carport is a structure designed to provide shelter for vehicles while also generating electricity from sunlight using solar panels installed on its roof. These solar carports typically consist of a steel or aluminum frame supporting a series of solar panels, which convert sunlight into electricity through the photovoltaic effect. The electricity generated by the solar panels can be used to power electric vehicles or be fed back into the grid to offset energy costs. PV solar carports offer multiple benefits, including providing shade for parked vehicles, generating clean and renewable energy, reducing carbon emissions, and utilizing available space efficiently, making them a sustainable and practical solution for both residential and commercial parking areas.
