According to our (Global Info Research) latest study, the global PVA Sponge market size was valued at US\$ 1011 million in 2025 and is forecast to a readjusted size of US\$ 1543 million by 2032 with a CAGR of 6.2% during review period.

In 2025, global PVA Sponge production reached approximately 182.4 M Pcs, with an average global market price of around 5.3 USD/pc.

PVA Sponge, short for Polyvinyl Alcohol Sponge, is a porous hydrophilic material made from polyvinyl alcohol via acetalization with an acid catalyst, featuring interconnected pores instead of independent cells. It boasts excellent properties such as high liquid absorption and retention capacity, lint-free and static-free performance, good flexibility, chemical resistance, and biodegradability, being non-toxic and safe for incineration or landfill without noxious gas emission, which resembles natural sea sponges yet with enhanced durability and functional adaptability.

The demand for PVA Sponge is driven by downstream industries like medical care, high-end cleaning, new energy vehicles, and electronics, fueled by strict environmental policies promoting biodegradable alternatives to traditional foam materials and the upgrading of terminal product performance requirements. Business opportunities lie in the development of functional modified products, expansion in high-value fields such as semiconductor cleaning and medical wound care, domestic substitution of high-end raw materials, and the exploration of customized solutions to cater to differentiated industrial needs, along with the growth potential in emerging regional markets and export sectors.
