Abstracts

The global PVB Double Glass Photovoltaic Module market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

PVB double glass photovoltaic modules use self-produced photovoltaic-grade PVB materials with high adhesive strength, high water resistance, high volume resistivity, and high light transmittance to replace the traditional EVA/POE packaging films in the photovoltaic industry for photovoltaic module production. The product's compressive strength Compared with solar photovoltaic modules produced by EVA packaging technology, the bonding strength of materials and the ability to prevent water vapor transmission have been greatly improved, thereby improving the weather resistance of photovoltaic modules and greatly prolonging the service life of photovoltaic modules. The increased compressive strength also reduces module installation costs accordingly.
