The full name of PVC-C power cable conduit is chlorinated polyvinyl chloride (PVC-C) conduit for buried high-voltage power cables. It is mainly used for laying power cables and plays a guiding and protective role. Compared with the traditional asbestos cement form, it has the characteristics of good flexibility, high temperature resistance, resistance to breakage and aging, long service life and no radiation pollution; The product adds a high-temperature rubber ring at the expansion socket connection to prevent thermal expansion and contraction, without the need for on-site pouring of concrete or protective layers; Light weight, easy construction, low cost, can greatly shorten the construction period; The Vicat softening temperature shall not be less than 93 °C, and the temperature generated by overload and short circuit of the cable inside the pipe shall have no effect on the product. Especially with good rigidity and heat resistance, it can withstand the temperature of the cable core and the external pressure of soil on the pipe generated during the operation of high-voltage power cables, and its price is relatively low and installation is simple.
