## Abstracts

According to our (Global Info Research) latest study, the global PVC Layflat Hose market size was valued at US\$ 549 million in 2025 and is forecast to a readjusted size of US\$ 824 million by 2032 with a CAGR of 6.0% during review period.

In 2025, global sales of PVC Layflat Hoses reached 860 million meters, with an average selling price of US\$0.62 per meter. PVC Layflat Hoses are foldable conveying hoses made of polyvinyl chloride resin as the base material, combined with plasticizers, stabilizers, and anti-aging additives. They are formed through extrusion with a high-strength polyester mesh reinforcement layer, featuring flexibility, lightness, pressure and wear resistance, corrosion resistance, and rapid deployment and recycling. They are suitable for agricultural irrigation, building drainage, municipal emergency drainage, mine pumping, and industrial fluid transportation. The industry's total capacity is approximately 1.1 billion meters per year, with an average gross profit margin of about 20%. Upstream raw materials mainly include PVC resin, environmentally friendly plasticizers, calcium-zinc stabilizers, and high-strength industrial yarns. Downstream, they are supplied to farmers, municipal units, and industrial enterprises through agricultural input distribution systems, engineering contractors, and equipment integrators. Agricultural irrigation accounts for 60% of downstream consumption. The future lies in upgrading to a high-pressure-resistant multi-layer co-extrusion structure and phthalate-free environmentally friendly formula, as well as extending into water-saving irrigation system integration and overseas infrastructure markets. With the advancement of agricultural water-saving policies and the accelerated construction of infrastructure in emerging markets, demand continues to be released, and companies with large-scale manufacturing and channel integration capabilities will gain greater business opportunities.
