Abstracts

According to our (Global Info Research) latest study, the global PVC Mining Cable Hooks market size was valued at US\$ 60.32 million in 2025 and is forecast to a readjusted size of US\$ 90.42 million by 2032 with a CAGR of 6.0% during review period.

PVC mining cable hooks are manufactured through compounding and injection molding, using flame-retardant and antistatic modified PVC as the primary material. Designed to be secured to tunnel walls, anchor bolts, wire ropes, or support mesh in coal mines and underground mines, they serve as insulating supports for the tiered suspension, securing, and protection of power, control, and communication cables (including fiber optics). Key features include lightweight construction, corrosion resistance, electrical insulation, rapid installation capabilities, and ease of cable adjustment. They are primarily used in underground coal mines, underground metal and non-metal mines, mining tunnels, underground engineering projects, and communication line installations. The upstream supply chain includes PVC resin, flame retardants, antistatic agents, heat stabilizers, toughening agents, masterbatches, steel connectors, and injection molds; the midstream involves modified granulation, injection molding, assembly, load-bearing testing, and flame-retardant/antistatic testing; the downstream market consists mainly of coal mining groups, metal mining enterprises, and mine construction companies.
