Abstracts

The global PVC (Polyvinyl Chloride) Rods market size is expected to reach \$ 205 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

In 2025, global PVC (Polyvinyl Chloride) Rods production reached approximately 4.5 million units, with an average global market price of around US\$ 30 per unit. Monthly production capacity is 5000 per line. Gross Profit Margin: 35%. The PVC rod industry chain begins with upstream suppliers of raw PVC resin and additives, moves through compounding and extrusion processes to manufacture rods of various diameters and grades, and extends to downstream distribution for industrial, construction, electrical, and DIY applications, serving both domestic and international markets. PVC rods are a versatile and cost-effective material widely used across industries due to their durability, chemical resistance, and ease of fabrication. They offer a practical alternative to metals in applications where weight reduction, corrosion resistance, or electrical insulation is important.
