PVC reflective film is a film made of polyvinyl chloride (PVC) material with retro-reflective properties. It achieves retro-reflection by coating a layer of high-reflectance glass beads or micro-prism structures on the surface of the PVC film, so that light incident on the film surface is reflected back in the direction of the incident light. PVC Reflective Film exhibits excellent reflective performance, weather resistance, and corrosion resistance, making it widely used in road traffic safety signs, vehicle identification, advertising signboards, and other fields. In road traffic safety signs, PVC Reflective Film ensures the clear visibility of traffic signs at night or in low-light conditions, enhancing the safety and convenience of road users. In vehicle identification, it can be used to make license plates, reflective strips on vehicle bodies, etc., improving vehicle identification and safety. Additionally, PVC Reflective Film is a preferred choice for advertising signboards and decorative materials due to its bright colors and durable reflective properties.
