Abstracts

PVC resin for pipes is a special type of polyvinyl chloride (PVC) resin, which is mainly used to manufacture various pipes and pipes. PVC resin is a high molecular polymer made from vinyl chloride monomer (VCM) through polymerization reaction. It has good chemical stability, corrosion resistance and wear resistance, so it is widely used in water supply pipes, drainage pipes and other types of piping systems. In pipe applications, PVC resin usually adds certain additives, such as stabilizers, lubricants, fillers, etc., to improve its properties, such as enhancing its heat resistance, impact resistance and pressure resistance. These properties make PVC pipe a very popular material in the construction and industrial sectors.
