## Abstracts

The global PVC Resins market size is expected to reach \$ 67920 million by 2029, rising at a market growth of 3.4% CAGR during the forecast period (2023-2029).

Global key players of PVC Resins include Shin-Etsu Chemical, Westlake Chemical, Formosa Plastics, INEOS Inovyn and Orbia, etc. The top five players hold a share over 30%. China is the largest market, has a share about 40%. In terms of product type, Ethylene Process is the largest segment, occupied for a share of about 85%, and in terms of application, Pipes, Profiles and Fittings has a share about 58 percent.

Polyvinyl chloride (PVC), together with polyethylene (PE), polypropylene (PP), polystyrene (PS) and ABS, are collectively referred to as the five general-purpose resins. PVC has the characteristics of flame retardancy, abrasion resistance, chemical resistance, electrical insulation and easy processing. It is one of the most widely used plastic varieties in industry, construction, agriculture, daily life, packaging, electricity, and public utilities.

Polyvinyl chloride (PVC) occurs as white, amorphous, odourless powder. Two types of PVC homopolymer are produced: rigid resins which are inflexible and hard; and flexible resins which contain a large proportion of plasticiser to make them soft and can be stretched. Products made from rigid PVC include pipe and conduit and roofing tiles. Flexible PVC finds outlets in wire and cable coating, flooring, coated fabrics and shower curtains. Other outlets for flexible PVC are film and sheet and flooring.

This report studies the global PVC Resins production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for PVC Resins, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
