Abstracts

According to our (Global Info Research) latest study, the global PVD Coating market size was valued at US\$ 334 million in 2025 and is forecast to a readjusted size of US\$ 577 million by 2032 with a CAGR of 8.0% during review period.

PVD coating refers to a type of functional thin film coating formed on the surface of materials through physical vapor deposition technology. Its essence is to convert metal or compound materials into gas-phase particles through evaporation, sputtering, or ionization in a vacuum environment, and then deposit them onto the surface of the workpiece to form a dense thin film, thereby endowing the substrate with higher hardness, wear resistance, corrosion resistance, and decorative effect. This technology is widely used in the appearance of 3C electronic products, automotive components, and other fields, achieving significant improvement in material surface properties through nanoscale or micrometer level coatings while maintaining the original structure and properties of the substrate. In 2025, global PVD Coating production reached approximately 39,228 Tons, with an average global market price of around US\$ 8,285 per ton. The annual production capacity of PVD coating is 50,000 tons, with a gross profit margin of about 30%.

Upstream: high-purity metal materials; Target material (PVD core consumables); High purity gases, etc.

Downstream: Consumer Electronics; Automotive components (interior, decorative parts), cosmetic packaging, etc.

Cost structure analysis: Material costs are approximately 30% -45%; Labor and technology account for approximately 10% -20%; Energy and operating costs are

approximately 10% -15%; Other expenses are approximately 15% -20%.
