According to our (Global Info Research) latest study, the global PVD Vacuum Coating Machine market size was valued at USD 3812.5 million in 2023 and is forecast to a readjusted size of USD 4943.3 million by 2030 with a CAGR of 3.8% during review period.

PVD (Physical Vapor Deposition) technology is one of the main technologies for preparing thin film materials. Physical methods are used under vacuum conditions to vaporize a material into gaseous atoms, molecules or partial ionization into ions, and pass through low-pressure gas (or plasma) process, depositing thin film materials to achieve special functions such as anti-reflection, reflection, protection, conduction, magnetic permeability, insulation, corrosion resistance, oxidation resistance, radiation protection, decoration, etc. on the surface of the substrate material. The substances used to prepare thin film materials are called PVD coating materials. Sputtering coating and vacuum evaporation coating are the two most mainstream PVD coating methods.

Top 2 manufacturers of PVD vacuum coating machine globally are Applied Materials and ULVAC. These 2 players account for over 45% of global market share. Geographically speaking, Asia-Pacific is the largest market, accounting for over half of total market share.
