According to our (Global Info Research) latest study, the global PVDF Syringe Filters market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

PVDF syringe filter is a microporous membrane filter made of polyvinylidene fluoride (PVDF) material, usually used with a needle or syringe for filtering, separating and purifying liquids, gases or solid powders. Its unique material properties and design make PVDF syringe filters perform well in a variety of experiments and application scenarios.

PVDF material has extremely strong chemical stability and can withstand the erosion of a variety of strong acids, strong bases and organic solvents, and is suitable for filtering a variety of corrosive media. PVDF material is resistant to high temperatures and can maintain stable filtration performance within a certain temperature range. PVDF membrane has extremely low protein adsorption, which can reduce the adsorption of protein in the sample and improve the filtration effect. PVDF membrane has a certain hydrophilicity and can better wet and filter aqueous samples.
