The global PVT Crystal Growth Systems for SiC market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

With the intensive launch of silicon carbide models of electric vehicles, the current demand for SiC devices is blowing out. In the future, the supply of SiC substrates still cannot meet the market demand.

Silicon carbide (SiC) is a key material used in many different high-tech applications, from semiconductors to power electronics. Up to now, the most successful growth method for bulk SiC single crystal is PVT method which consists of the following procedures: (1) sublimation of SiC source, (2) mass transport of sublimed species, and (3) surface reaction and crystallization. PVT Crystal Growth Systems is a equipment for SiC single crystal growth.

This report studies the global PVT Crystal Growth Systems for SiC production, demand, key manufacturers, and key regions.
