The global PVT Phase Behavior System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

PVT fluid phase state system is a device used to study the fluid phase state characteristics of reservoir fluid under the conditions of reservoir pressure and temperature. PVT is pressure-volume-temperature. The purpose of this device research is to determine the physical and chemical properties of the fluid in order to predict its behavior as a function of pressure and temperature. PVT studies are used to assess hydrocarbons at surface conditions, simulate reservoir fluid behavior during all production processes, and establish production profiles relevant to development plans.
