Pyrolytic graphite heaters, also known as pyrolytic graphite resistive heaters or simply PGR heaters, are specialized heating elements made from pyrolytic graphite material. Pyrolytic graphite is a synthetic form of graphite with unique thermal and electrical properties that make it ideal for high-temperature heating applications. These heaters are designed to provide precise and uniform heating in a wide range of industrial, research, and scientific applications.

The use of pyrolytic graphite heaters in high-temperature applications, such as semiconductor manufacturing, aerospace, and materials research, may have driven an increased demand for these heaters. As these industries continue to advance, the demand for high-temperature heating solutions could have risen.

The semiconductor industry relies heavily on precise temperature control during various manufacturing processes. Pyrolytic graphite heaters are often used in semiconductor equipment for processes like annealing and chemical vapor deposition. As the semiconductor industry grows, so does the demand for advanced heating solutions.

Research institutions and laboratories utilize pyrolytic graphite heaters for high-temperature experiments and materials research. Advances in materials science and nanotechnology may have contributed to a growing need for specialized heating elements.
