Abstracts

Pyroprocessing is a process in which any material is subjected to high temperature, typically over 800 degree Celsius in order to bring about a change in its chemical or physical property. Molten salts include lithium chloride (LiCl) and potassium chloride or lithium fluoride or calcium fluoride. Several types of molten metal used for pyroprocessing are magnesium, bismuth and cadmium. With the change in physical or chemical properties of minerals, ores or other materials pyroprocessing increases the economic value of these materials.
