According to our (Global Info Research) latest study, the global Q Cloth Loom market size was valued at US\$ 273 million in 2025 and is forecast to a readjusted size of US\$ 734 million by 2032 with a CAGR of 15.2% during review period.

Q-fiber looms are specialized equipment for weaving quartz fiber cloth. The core challenge lies in the high brittleness, high modulus, and poor abrasion resistance of quartz fibers, placing far more stringent requirements on tension control and weft insertion methods than on ordinary fiberglass looms. Q-fiber weaving primarily utilizes rapier looms, which offer more stable clamping and less damage to brittle yarns, effectively reducing pilling and breakage. They are the mainstream machine model for producing high-density, high-quality electronic-grade Q-fiber cloth.

In 2025, global Q Cloth Loom sales reached approximately 135 Units, with an average global market price of around 2,170.62 K US\$/Unit. Production capacity reached 500 Units, with a gross profit margin of approximately 55%.
