## Abstracts

According to our (Global Info Research) latest study, the global Q-switched Nanosecond Pulsed Laser market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The Q-switched nanosecond pulse laser is a laser capable of generating nanosecond pulses. Using Q-switching technology, the energy is accumulated in the laser medium and a high-energy pulse is released at a specific moment. Q-switching technology places a Q-switching device in the laser cavity to control the reflectivity in the cavity to achieve energy accumulation and release.

Q-switched nanosecond pulse lasers are widely used in many fields. Select the appropriate Q-switched nanosecond pulse laser according to specific application requirements, including parameters such as wavelength, pulse energy, and repetition rate. At the same time, when operating and using lasers, relevant safety operating procedures must be followed to protect eyes and skin from laser radiation damage.
