Abstracts

Quantitative Polymerase Chain Reaction (qPCR) reagent is a solution or mixture that is used in qPCR technique to amplify and quantitate Deoxyribonucleic acid (DNA) sequences in a sample. It also called as Real-time Polymerase Chain Reaction reagent. Essentially, qPCR reagents are sold in the form of separate solutions in kits or as optimized master-mixes used specifically for a function. qPCR kits called as Core kits have solutions separately in tubes with a specific quantity while master-mixes have solutions that have been measured and mixed which perform the basic functions and are available in a single tube.

SCOPE OF THE REPORT:

This report focuses on the qPCR Reagents in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In 2017, North America is estimated to dominate the global market. The Asia-Pacific market is poised to grow the fastest, during the forecast period, owing to increasing penetration of global life sciences companies in this region, rising focus of governments on increasing the awareness about gene-based disease diagnosis and treatment, growing public and private support to develop novel qPCR technologies, and advancing cancer research in Japan.
