Abstracts

QSFP optical transceiver is a four-channel small pluggable optical module with four independent full-duplex transceiver channels. It was originally designed to replace single-channel SFPs with high-density optical modules. QSFP is only 30% larger than standard SFP modules. This device supports rates from 100Mbps to 10Gbps, and like SFP, it also has digital diagnostic capabilities to monitor link performance. QSFP was developed for high-density applications. The original system design was limited by the area of the equipment frame panel and the number of optical fibers. Using standard SFP or 10Gbps XFP connectors, the number of channels that can be accommodated was mainly limited by physical space.

According to our (Global Info Research) latest study, the global QSFP Optical Transceiver market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
