A quad-motor drive system refers to a powertrain equipped with four motors in a vehicle, each driving one of the four wheels. This system significantly enhances the vehicle's dynamic and handling performance by precisely allocating power, resulting in smoother and more rapid acceleration and deceleration. Additionally, through the coordination of the rotational speeds and torques of different wheels, it can achieve special driving functions such as spinning in place, turning on a pivot, and lateral movement. These capabilities improve the vehicle's maneuverability and emergency avoidance abilities in confined spaces or complex road conditions.
