Quality Control Inspection refer to independent commercial inspection services performed by professional service providers outside the buyer, seller, or manufacturing entity to verify whether products, materials, semi-finished goods, finished goods, packaging, labeling, loading conditions, supplier processes, and delivery status meet agreed quality requirements. This study focuses on inspection services used in manufacturing supply chains, international trade, brand retail, e-commerce sourcing, industrial procurement, and commodity circulation. Typical service formats include initial production checks, during production inspections, final random inspections, pre-shipment inspections, full inspections, sampling inspections, container loading checks, factory audits, supplier quality audits, resident quality control, source inspections, FAT/SAT witnessing, and quality and quantity verification of traded goods. Service providers normally inspect workmanship, dimensions, functions, performance, packaging, markings, quantities, documents, and shipment conditions based on customer specifications, purchase contracts, product standards, AQL sampling plans, inspection protocols, regulatory requirements, or industry norms, and deliver inspection reports, photographic evidence, defect classification, pass/fail conclusions, corrective action suggestions, and risk alerts.
