The quality traceability system deeply integrates the concept of informationization in the production and supply chain management of enterprises. By introducing computer technology, barcode technology, electronic label technology, product digitalization and other technologies, a quality information chain that runs through the entire life cycle of products is established, which can realize positive logistics. Tracking and reverse tracing can improve the level of enterprise production quality management. The quality traceability system runs through the links of enterprise procurement, warehouse, production, outsourcing processing, sales and after-sales service, and effectively monitors the information in each link of product raw material supply, product production and processing, packaging correspondence, warehouse management, orders, logistics, and sales channels. Collection, correspondence and management, so as to monitor the whole process of product life cycle, realize logistics tracking, quality control and traceability.
