According to our (Global Info Research) latest study, the global Quantum Computing Cloud Service market size was valued at US\$ 335 million in 2024 and is forecast to a readjusted size of USD 2595 million by 2031 with a CAGR of 34.4% during review period.

Quantum Computing, this branch of computer science is based on the principles of the superposition of matter and quantum entanglement and uses a different computation method from the traditional one. In theory, it would be able to store many more states per unit of information and operate with much more efficient algorithms at the numerical level, such as Shor's or quantum annealing. Quantum cloud computing employs quantum principles to distributed computing, while cloud computing uses remote servers to provide distributed computing services. Cloud computing simply refers to providing services such as data storage, servers, databases and networking via the internet.
