According to our (Global Info Research) latest study, the global Quantum Computing Software market size was valued at US\$ 203 million in 2024 and is forecast to a readjusted size of USD 263 million by 2031 with a CAGR of 3.8% during review period.

Quantum Computing Software refers to software programs and tools that can be used for designing, developing, simulating, and running quantum algorithms and applications on quantum computers. These software tools are specifically designed to leverage the unique properties of quantum mechanics, such as superposition, entanglement, and interference, to perform complex calculations and solve difficult problems more efficiently than classical computers.

Quantum computing software is a bridge connecting users and quantum computing hardware devices. The efficient operation and use of quantum computers cannot be separated from the support of quantum software. Quantum software must meet the underlying physical principles and algorithmic logic of quantum computing. It has strong professionalism and specificity, and plays a vital role in the development and application of quantum technology. Due to the high professional threshold of quantum computing software and the lack of interdisciplinary R&D personnel, it is still in the early stage of ecosystem establishment, and openness and open source have become the main trends in the development of quantum computing software.
