## Abstracts

According to our (Global Info Research) latest study, the global Quantum Key Management Device market size was valued at US\$ 393 million in 2025 and is forecast to a readjusted size of US\$ 1016 million by 2032 with a CAGR of 14.6% during review period.

A quantum key management machine (QKM) is a core key control device for high-security communication and information systems. It is primarily used for the centralized management, storage, distribution, and lifecycle control of keys generated from quantum key distribution (QKD) systems or other highly reliable random sources. Located between the quantum communication network and upper-layer cryptographic applications, it is responsible for key reception verification, key pool management, policy scheduling, access control, and interface adaptation with traditional encryption devices (such as encryption machines, VPNs, firewalls, and database encryption systems), thereby enabling the usability and engineering implementation of quantum keys in practical business systems. Compared to traditional key management systems, the QKM emphasizes ensuring the authenticity, non-replicability, and compliance of quantum keys, making it a crucial hub in quantum communication networks, quantum-secure private networks, and post-quantum cryptography systems. In 2025, sales reached 128,000 units, with an average price of \$2,985, a capacity utilization rate of 92%, and a gross profit margin of 64%.
