Quartz crystal filter is a band-pass or band-stop filter composed of several pairs of metal electrodes arranged on the surface of a quartz substrate. It utilizes the energy trapping theory of the piezoelectric effect, selects the geometric size of the electrode vibrator, the return frequency and the spacing of the electrode vibrator, and controls the acoustic coupling of the ultrasonic wave, so as to achieve the purpose of filtering. Quartz crystal filter is an electrical filter using a quartz crystal resonator as the basic component. Because it has a high quality factor (above tens of thousands), it is widely used in military and civilian electronic equipment, especially in the intermediate frequency range. has an irreplaceable status.
